1. Introduction

1.1 Background

GHD Pty Ltd (GHD) has been engaged by Evoenergy to prepare the Environmental Impact Statement (EIS) for the proposed installation of a new 132 kilovolt (kV) transmission line 3.6 kilometres in length in the district of Jerrabomberra, approximately 12 kilometres to the south east of the Canberra City Centre in the Australian Capital Territory (ACT) (the proposal). The transmission line would extend from the existing East Lake-Gilmore 132 kV line on the Monaro Highway, east along Hindmarsh Drive to Canberra Avenue, and along the southern reserve of Canberra Avenue to a new substation at HMAS Harman (subject to a separate planning process).

Evoenergy is the proponent of the Jerrabomberra Transmission Line Extension and it is intended that Evoenergy will own and operate the proposed electricity transmission line.

This report presents the Traffic Impact Assessment (TIA) to address the key assessment requirements in the EIS from a traffic perspective for construction and operation of the proposed infrastructure.

1.2 Project overview

1.2.1 Objectives

The existing capacity and infrastructure does not meet the capacity forecast within the Jerrabomberra area. The key objective of the Project is to increase the electrical capacity to ensure the future needs of the area are adequately met.

1.2.2 The Project

The Project will involve the following:

- Installation of poles and lines in the Monaro Highway road reserve – National Capital Authority (NCA) approvals process.
- Installation of poles and lines in the Hindmarsh Drive road reserve – ACT Government process.
- Installation of laydown area in the Narrabundah Lane road reserve – ACT Government process.
- Potential light vehicle construction access on up to 12 blocks – ACT Government process.
- Installation of poles and lines in the Canberra Avenue road reserve – NCA approvals process.

The above works are all included in the scope of the EIS.

1.3 Project location

The Project is located at Jerrabomberra, extending from the existing East Lake-Gilmore 132 kV line on the Monaro Highway, running east along Hindmarsh Drive to Canberra Avenue, then along the southern side of Canberra Avenue, connecting into a new substation at HMAS Harman. The project location is shown in Figure 1-1.

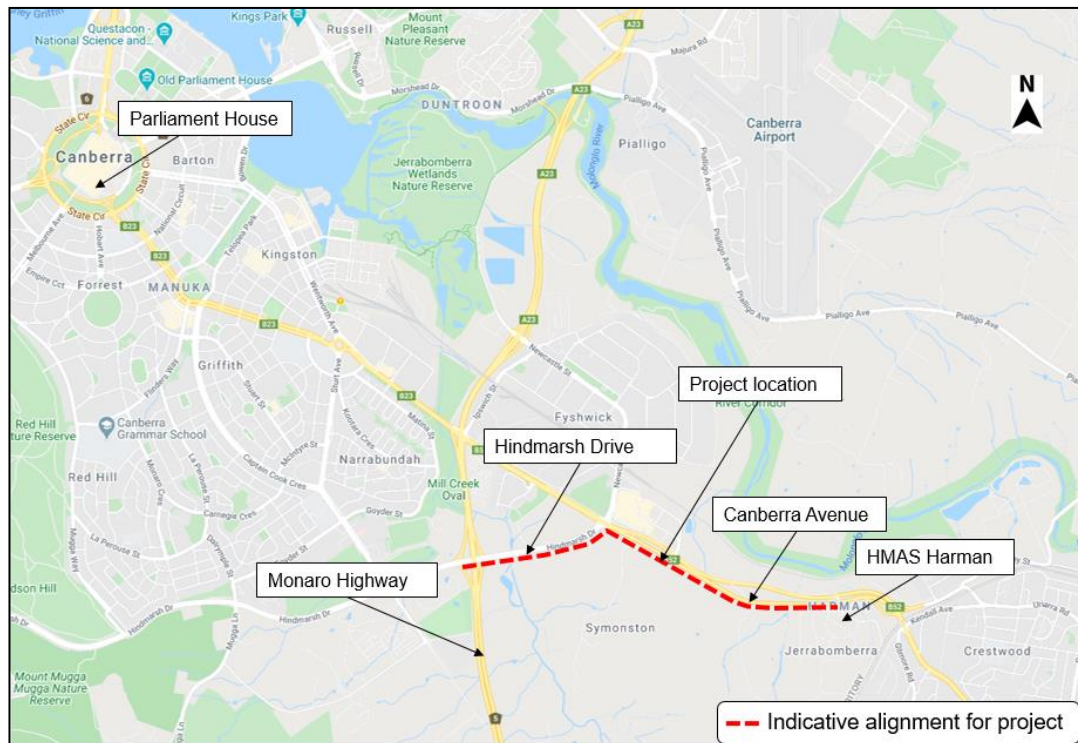

Figure 1-1 Site location

1.4 Scope of this report

This Traffic and Parking Impact Assessment identifies the potential traffic impacts and management as a result of the construction of 3.6 kilometres in length transmission line extending from the existing East Lake-Gilmore 132 kV line on the Monaro Highway, east along Hindmarsh Drive to Canberra Avenue, and along the southern reserve of Canberra Avenue. The TIA also assesses the impacts on road users and vehicle movements during the construction phase and operational phase in association with the ongoing maintenance of the infrastructure post construction.

The following are included in the scope of works:

- Provide a Traffic Management Plan detailing all safety measures to be implemented during construction.
- Describe arrangements for the transport of construction materials, equipment, products and personnel during the construction phase of the development proposal.
- Include a description of the volume of traffic generated during construction.
- Investigate the impacts the proposal will have on traffic congestion and road safety and describe mitigation measures to reduce impacts.
- Investigate the impacts on the vehicular route chosen to transport oversized equipment and accessories by heavy vehicles and describe mitigation measures to reduce the impacts.

- Identify and investigate each of the entrance/exit points to be utilised during construction to ensure the minimum stopping sight distances are achieved in accordance with any applicable standards.

1.5 Study assumptions and limitations

The preparation of this study was limited by the following:

- Desktop assessment, as no site visit has been undertaken.
- Traffic signal data were provided by ACT Transport services using signal detector counts. The counts were collected for 24 hours from Monday 10 February 2020 until Sunday 16 February 2020.
- The traffic counts were provided for the following intersections:
 - Canberra Avenue / Woods Lane
 - Canberra Avenue / Tom Price Street
 - Canberra Avenue / Hindmarsh Drive
 - Monaro Highway / Hindmarsh Drive
- The midblock traffic counts were extracted using intersection counts.

Assumptions used in this Traffic and Parking Impact Assessment are as follows:

- Assumptions on construction and operational traffic generation and distribution for the Project, provided by the client, as detailed in Section 4.
- Construction of the Project is expected to commence in January 2021 with construction expected to occur over approximately seven month period.
- No background traffic growth has been applied to the collected traffic volumes for the assessment of the construction and operational traffic impacts.

1.6 Disclaimer

This report: has been prepared by GHD for Icon Distribution Investments Limited And Jemena Networks (ACT) Pty Ltd T/As EvoEnergy Limited) and may only be used and relied on by Icon Distribution Investments Limited And Jemena Networks (ACT) Pty Ltd T/As EvoEnergy Limited) for the purpose agreed between GHD and the Icon Distribution Investments Limited And Jemena Networks (ACT) Pty Ltd T/As EvoEnergy Limited) as set out section 1.4 of this report.

GHD otherwise disclaims responsibility to any person other than Icon Distribution Investments Limited And Jemena Networks (ACT) Pty Ltd T/As EvoEnergy Limited) arising in connection with this report. GHD also excludes implied warranties and conditions, to the extent legally permissible.

The services undertaken by GHD in connection with preparing this report were limited to those specifically detailed in the report and are subject to the scope limitations set out in the report.

The opinions, conclusions and any recommendations in this report are based on conditions encountered and information reviewed at the date of preparation of the report. GHD has no responsibility or obligation to update this report to account for events or changes occurring subsequent to the date that the report was prepared.

The opinions, conclusions and any recommendations in this report are based on assumptions made by GHD described in this report (refer section 1.5 of this report). GHD disclaims liability arising from any of the assumptions being incorrect.

1.7 Report structure

The remaining sections of this report are structured as follows:

- **Section 2 – Method:** describes the steps undertaken in the assessment.
- **Section 3 – Existing conditions:** provides a review of existing road features, adjacent proposed infrastructure, traffic volumes and crash data.
- **Section 4 – Construction activities:** details the additional traffic generated as a result of the construction of the Project.
- **Section 5 – Traffic impact assessment:** examines the potential traffic and transport impacts associated with the construction and operation of the Project.
- **Section 6 – Mitigation measures:** outlines the proposed mitigation strategies to be implemented during the life of the Project to manage the potential traffic and transport impacts.
- **Section 7 – Conclusion:** presents a conclusion to the report and presents the next steps in the advancement of the Project.

2. Method

This section outlines the method and evaluation criteria used in the traffic assessment of the Project.

2.1 Scope

- This report focuses on the ultimate peak construction traffic generation scenario for each road impacted by the Project and the overall effect on the higher order road network.
- Traffic generation associated with the operation of the Project will be significantly lower than during the peak construction period. Traffic impacts will therefore be reduced during the operational period compared to the construction period.

2.2 Method of assessment

This Traffic and Parking Impact Assessment has been undertaken with reference to the *Guide to Traffic Generating Development* (Roads and Maritime Services 2002). While not mandatory, the guide provides a process and methodology to undertake a Traffic and Parking Impact Assessment. The traffic operation assessment process outlined in the guide identifies the operating characteristics and the need for it to be compared with agreed performance criteria.

The guide states that existing daily traffic volumes on roads adjacent to a proposed development should be compared with estimated daily traffic volumes. This enables the functions of roads in the overall hierarchy of roads to be reviewed in the context of the proposed development or works.

The assessment criteria adopted for this report is outlined in the following sections.

2.2.1 Midblock assessment criteria

According to *Austroads Guide to Traffic Management, Part 3: Traffic Studies and Analysis Methods, Section 6.2.1*, the one-way mid-block capacity of an urban arterial road with interrupted flow varies depending on the type of lane. The typical mid-block capacity for urban roads with interrupted flow is outlined in Table 2-1.

An interrupted flow facility road is one in which traffic flow conditions are subject to the influence of fixed elements such as traffic signals, stop signs, give-way signs, roundabouts or other controls which cause traffic to stop periodically, irrespective of the total amount of traffic; examples include urban streets, unsignalised and signalised intersections.

Table 2-1 Typical mid-block capacity for urban roads with interrupted flow

Type of lane	One-way mid-block capacity (pc/h)
Median or inner lane	
Divided road	1,000
Undivided road	900
Middle lane (of a 3 lane carriageway)	
Divided road	900
Undivided road	1,000
Kerb lane	
Adjacent to parking lane	900
Occasional parked vehicles	600
Clearway conditions	900

Source: Table 6.1 in Austroads

Note: pc/h = passenger cars per hour

Austroads Guide to Traffic Management Part 3 – Traffic Studies and Analysis Methods, Section 6.2.1 outlines that:

Peak period mid-block traffic volumes may increase to 1,200 to 1,400 pc/h/lane on any approach road when the following conditions exist or can be implemented:

- Adequate flaring at major upstream intersections
- Uninterrupted flow from a wider carriageway upstream of an intersection approach and flowing at capacity
- Control or absence of crossing or entering traffic at minor intersections by major road priority controls
- Control or absence of parking
- Control or absence of right turns by banning turning at difficult intersections
- high volume flows of traffic from upstream intersections during more than one phase of a signal cycle
- Good co-ordination of traffic signals along the route.

For the purposes of this assessment:

- A one-way mid-block capacity of 1,200 pc/h/lane has been adopted for arterial roads in the study area, which includes Canberra Avenue.
- A one-way mid-block capacity of 900 pc/h/lane has been adopted for Hindmarsh Drive.

This is in keeping with the Austroads special conditions which are reflective on the existing conditions for roads in the study area. This capacity is used to assess the Volume Capacity Ratio (VCR) of a particular road.

The VCR is a measure of the level of congestion on a road given the traffic volume and road capacity. When the VCR reaches 1, this indicates that the road is operating at 100 percent capacity.

3. Existing conditions

3.1 Existing road network characteristics

This section provides an understanding of the existing road network surrounding the site.

Road hierarchy

According to Trunk Road Infrastructure Standard No. 01 (Road Planning ACT 2012), the classification of roads in the ACT is based on a formal road hierarchy. The classification fundamentally relates to the predominant function of a road and to the extent it serves the two basic purposes of the road network – the movement of traffic and access to property.

There are two primary types of roads within the ACT road network – trunk roads (arterial roads) and local roads (major collector roads, minor collector roads, and access streets).

A hierarchical road network is essential to maximise road safety, amenity and legibility and to provide for all road users. Each class of road in the network serves a distinct set of functions and is designed accordingly.

The road classifications used are as follows:

Arterial Roads

Arterial roads predominantly serve longer distance travel within a district and through traffic from one district to another, and form the principal avenues of communication for metropolitan scale traffic movements. They include limited access roads and parkways (or freeways) having full access control and grade separated intersections.

Major Collector Roads

Major collector roads collect and distribute traffic within residential, industrial and commercial areas. They form the link between the primary network and the roads within local areas and should carry only traffic originating or terminating in the area. The volume of traffic carried is constrained by environmental objectives - safety and traffic noise - rather than road geometry and reflects the limited area that they serve.

Minor Collector Roads

Minor collector roads collect and distribute traffic from access streets, linking to the major collector roads within the neighbourhood. They can also provide secondary connections direct to the external arterial road network. Traffic volumes are compatible with direct property access.

Access Streets

Access Streets provide access but do not accommodate traffic generated by sites in other streets, excluding rear lanes.

Functional Hierarchy

Functional road classification involves the relative balance of the mobility and access functions. The Estate Development Code DV306 provides guidelines on functional road hierarchy and traffic volumes as follows:

- **Arterial Roads** – The traffic volume are more than 6,000 vehicles per day.
- **Major Collector Roads** – Major Collector Roads collect and distribute traffic within residential, industrial and commercial areas. They form the link between the primary network and the roads within local areas and should carry only traffic originating or terminating in the area. The volume of traffic carried is constrained by environmental objectives – safety and traffic noise – and reflects the limited area that they serve. Direct property access is still permissible but the access and egress arrangements should be such that vehicles can exit properties in a forward direction.

The traffic volumes typically range between 3,001-6,000 vehicles per day.

- **Minor Collector Roads** – A minor collector road collects and distributes traffic from access streets to major collector roads or direct to the external arterial road network. A reasonable level of residential amenity and safety is maintained by restricting vehicle speeds by means of street alignment, intersection design or by speed-control measures. Direct property access is allowed.

The traffic volumes typically range between 1,001-3,000 vehicles per day.

- **Access Street** – Access streets are used where the residential environment is dominant, traffic is subservient, speed and traffic volumes are low and pedestrian and cycle movements are facilitated. Access Streets generally collect traffic from rear lanes and connect to collector roads; they do not normally accommodate traffic from other streets.

The traffic volumes typically range between 0-1000 vehicles per day.

3.1.1 Canberra Avenue

Canberra Avenue is adjacent to the northern side of the study area with two lanes in eastbound and westbound directions separated by a wide central median. Designated right and left turn lanes are provided approaching the intersections.

Canberra Avenue has the following key features outlined in Table 3-1 and shown in Figure 3-1.

Table 3-1 Canberra Avenue key features

Feature	Description
Carriageway	Generally, two traffic lanes are provided in each direction separated by a wide central median.
Parking	No Stopping restriction
Speed Limit	80 km/h sign posted
Pedestrian Facilities	Footpaths are provided on the northern side of Canberra Avenue.
Bicycle Facilities	Dedicated cycle lanes are provided approaching Tom Price Street and Hindmarsh Drive.
Public Transport	Canberra Train Station is located on the eastern side of Canberra Avenue, west of the site (in Kingston). Bus stops are located on the northern and southern sides of Canberra Avenue. Canberra Avenue at Woods Lane bus stop is located on the eastern side of where the proposed transmission line terminates.

Figure 3-1 Canberra Avenue, viewed east of Hindmarsh Drive

3.1.2 Hindmarsh Drive

Hindmarsh Drive is adjacent to the northern side of the study area, with two lanes in each direction separated with a raised median. Dedicated right and left turns are provided at intersection approaches.

Hindmarsh Drive has the following key features outlined in Table 3-2 and shown in Figure 3-2

Table 3-2 Hindmarsh Drive key features

Feature	Description
Carriageway	Generally, two lanes in each direction separated with a raised median.
Parking	No Stopping restriction
Speed Limit	60 km/h signposted in the eastbound direction and 80 km/h in westbound
Pedestrian Facilities	No dedicated facilities.
Bicycle Facilities	Dedicated cycle lanes on both sides of the road.
Public Transport	No dedicated bus stops on Hindmarsh Drive. The nearest bus stops are located on Canberra Avenue, around 300 m to the north of the site.

Figure 3-2 Hindmarsh Drive, viewed westwards from Canberra Avenue

3.1.3 Monaro Highway

Monaro Highway is adjacent to the western side of the study area and has two lanes in each direction separated with a grassed median. Monaro Highway consists of entry and exit ramps at Hindmarsh Drive and Monaro Highway interchange.

Monaro Highway has the following key features outlined in Table 3-3 and shown in Figure 3-3.

Table 3-3 Monaro Highway key features

Feature	Description
Carriageway	Two lanes separated lane in each direction.
Parking	No Stopping and No Parking restrictions.
Speed Limit	100 km/h, 80 km/h on the entry ramps to Hindmarsh Drive.
Pedestrian Facilities	No dedicated facilities
Bicycle Facilities	No dedicated facilities
Public Transport	No dedicated facilities

Figure 3-3 Monaro Highway viewed northwards, South of Hindmarsh Drive

3.2 Traffic volumes

3.2.1 Intersection traffic counts

The intersection counts were provided by Transport Canberra and City Services, using traffic signal detectors. Traffic data can be found in Appendix A. The counts were undertaken during 24 hour time periods, from Monday 10 February 2020 to Sunday 16 February 2020 for the following signalised intersections as shown in Figure 3-4:

- Canberra Avenue / Wood Lane
- Tom Price Street / Canberra Avenue
- Hindmarsh Drive / Canberra Avenue
- Monaro Highway / Hindmarsh Drive.

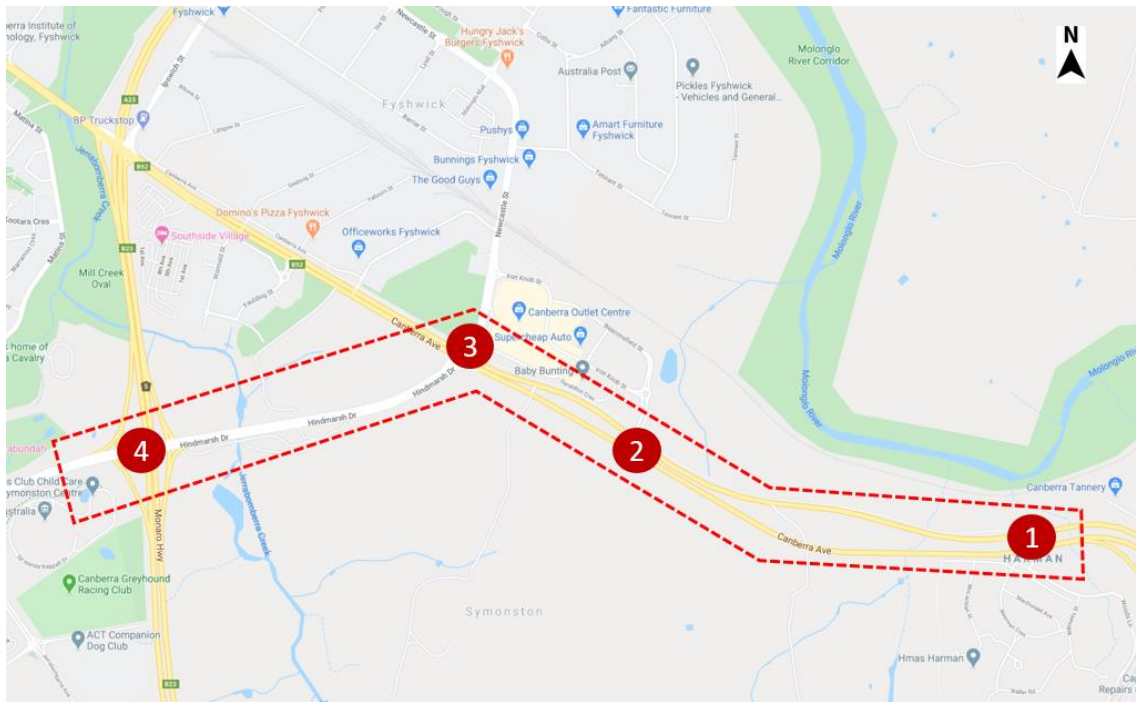

Figure 3-4 Signalised Intersection Traffic count locations

Analysis of the traffic survey data identified the following observed weekday AM and PM network peak hours:

- Weekday AM peak hour, between 8:00 am and 9:00 am
- Weekday PM peak hour, between 5:00 pm and 6:00 pm.

A summary of the surveyed AM and PM peak hour traffic volumes, for the above network peak hours, is provided in Table 3-4.

Table 3-4 Traffic Survey Summary

Road	Location	Traffic Volume (veh/d*) (weekday)		Average Daily Traffic Volume (weekday)	Peak Hour Volume AM (veh/h*)	
		Eastbound	Westbound		AM	PM
Canberra Avenue	East of Hindmarsh Drive	20,703	20,077	40,780	4,097	3,861
Canberra Avenue	East of Tom Price Street	21,744	22,203	43,947	4,264	4,206
Canberra Avenue	West of Woods Lane	21,261	21,700	42,961	4,116	4,135
Hindmarsh Drive	East of Monaro Highway	13,291	11,630	23,571	2,302	2,133

*Note veh/d = vehicles per day, veh/h = vehicles per hour

Canberra Avenue

The traffic data for Canberra Avenue (east of Tom Price Street) was collected between Monday 10 February 2020 to Sunday 16 February 2020. The average hourly weekday and weekend traffic volumes are shown in Figure 3-5.

The traffic data indicates that the morning peak period occurs between 8:00 am and 9:00 am. The peak volume in both directions during this period is approximately 4,264 vehicles, with 1,164 in the eastbound and 3,100 in the westbound directions.

The weekday evening peak was observed to be between 5:00 pm and 6:00 pm. The peak traffic volume in both directions during this period is approximately 4,206, with around 2,854 vehicles in the eastbound direction and 1,352 in the westbound direction.

The weekend peak hour was observed to be between 12:00 pm and 1:00 pm, with approximately 2,946 vehicles in both directions on Saturday.

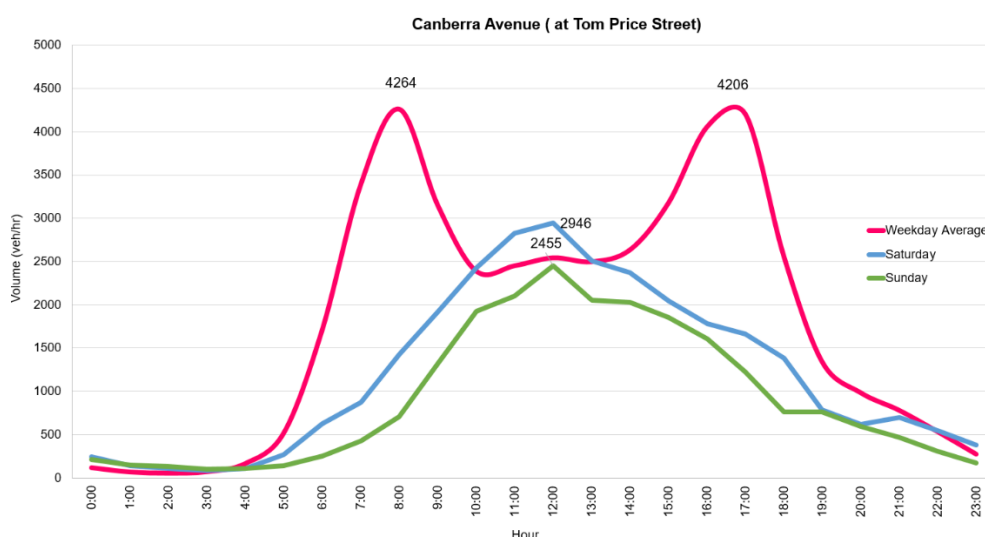

Figure 3-5 Average hourly traffic profiles – Canberra Avenue at Tom Price Street (2020)

Hindmarsh Road

The average hourly weekday and weekend traffic volumes are shown in Figure 3-6. The average weekday morning peak was observed to be between 8:00 am to 9:00 am. The peak volume in both directions during this period is approximately 2,302 vehicles, consisting of 1,215 and 1,117 in the eastbound and westbound directions, respectively.

The weekday evening peak hour was observed between 4:00 pm and 5:00 pm. The peak volume in both directions during this period is approximately 2,133 vehicles consisting of 1,147 in the eastbound and 1,221 in the westbound direction.

The weekend peak hour was observed on a Saturday between 12:00 pm and 1:00 pm, with approximately 1,879 vehicles on Saturday on eastbound and westbound directions. Traffic volumes were observed to be generally much lower on a Sunday with a total of 1,405 vehicles between 12:00 pm and 1:00 pm.

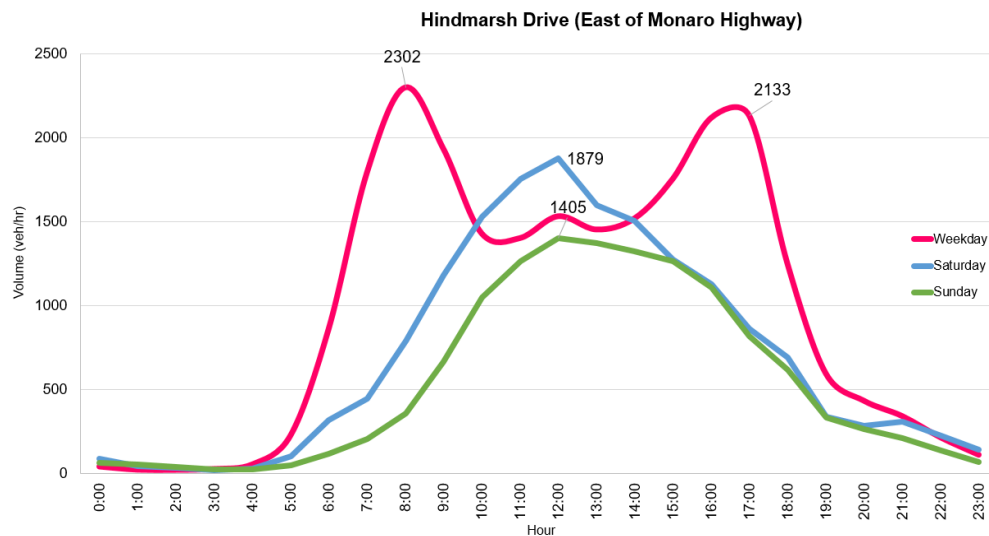

Figure 3-6 Average hourly traffic profiles – Hindmarsh Avenue east of Monaro Highway (2020)

3.2.2 Functional classification

The classification of roads within the existing road network can be used as an indication of the functional role each road plays with respect to the volume of traffic they should appropriately carry. Estate development Code have developed a set of road hierarchy classifications detailed in Table 3-5 which include typical daily traffic volume for various classes of roads.

Table 3-5 Functional classification of roads

Location	Traffic Volume (veh/d*)
Arterial Roads	>6,000
Major Collector Roads	3,001-6,000
Minor Collector Roads	1,001-3,000
Access Street	0-1000

Source: Estate development Code – ACT Government Environment and Sustainable Development, 2013

*Note veh/d = vehicles per day.

Based upon the traffic data outlined in Table 3-4 and criteria in Table 3-5, Monaro Highway, Hindmarsh Drive and Canberra Avenue are classified as arterial roads.

3.2.3 Mid-block capacity analysis

For the purposes of this assessment, a one-way mid-block capacity of 1,200 pc/h/lane has been adopted for the arterial roads, including Canberra Avenue and Hindmarsh Drive, which is in keeping with the Austroads special conditions, which are reflective on the existing conditions.

Table 3-6 and Table 3-7 provide the VCR results for the existing AM and PM peak hours, respectively. The following Passenger Car Units (PCU) factors have been applied to the survey, based on the PCU values provided in Table 10.1 in Roads and Maritime's *Traffic Modelling Guidelines* report (Roads and Maritime, 2013):

- Passenger car = 1.0
- Light commercial vehicle = 1.0
- Rigid heavy = 2.0
- Heavy vehicles (if the number of heavy articulated vehicles is unknown) = 2.5
- Bus = 2.0
- Articulated heavy = 4.0

The data indicates that Hindmarsh Drive in the vicinity of the Project is within the acceptable capacity during AM and PM peak periods. However, Canberra Avenue east of Tom Price Street westbound was found to be over capacity with a VCR of 1.45 and PCU of 3,472 vehicles per hour during AM peak. Similarly, the VCR during PM peak at Canberra Avenue east of Tom Price Street was determined as 1.33 with 3,196 vehicles travelling in the eastbound direction.

Table 3-6 Midblock volume / capacity analysis – AM peak hour

Road	Location	Direction	Capacity (veh/hr/lane)	Number of lanes	Total vehicles (PCUs)	V/C ratio
Canberra Avenue	East of Hindmarsh Drive	Eastbound	1,200	3	3,326	0.92
		Westbound	1,200	2	1,263	0.53
Canberra Avenue	East of Tom Price Street	Eastbound	1,200	2	1,304	0.54
		Westbound	1,200	2	3,472	1.45
Canberra Avenue	West of Woods Lane	Eastbound	1,200	2	1,160	0.48
		Westbound	1,200	2	3,450	1.44
Hindmarsh Drive	East of Monaro Highway	Eastbound	900	2	1,215	0.67
		Westbound	900	2	1,117	0.62

*veh = vehicles, hr = hour, PCU = passenger car units

Note, PCU factors = 1 for light vehicles, 2 for heavy vehicles (or 2.5 if the number of B-Doubles is unknown) and 4 for Articulated heavy

Table 3-7 Midblock volume / capacity analysis – PM peak hour

Road	Location	Direction	Capacity (veh/hr/lane)	Number of lanes	Total vehicles (PCUs)	V/C ratio
Canberra Avenue	East of Hindmarsh Drive	Eastbound	1,200	3	1,414	0.39
		Westbound	1,200	2	2,910	1.21
Canberra Avenue	East of Tom Price Street	Eastbound	1,200	2	3,196	1.33
		Westbound	1,200	2	1,515	0.63
Canberra Avenue	West of Woods Lane	Eastbound	1,200	2	1,252	0.52
		Westbound	1,200	2	1,171	0.49
Hindmarsh Drive	East of Monaro Highway	Eastbound	900	2	1,155	0.64
		Westbound	900	2	1,139	0.63

*veh = vehicles, hr = hour, PCU = passenger car units

Note, PCU factors = 1 for light vehicles, 2 for heavy vehicles (or 2.5 if the number of B-Doubles is unknown) and 4 for Articulated heavy

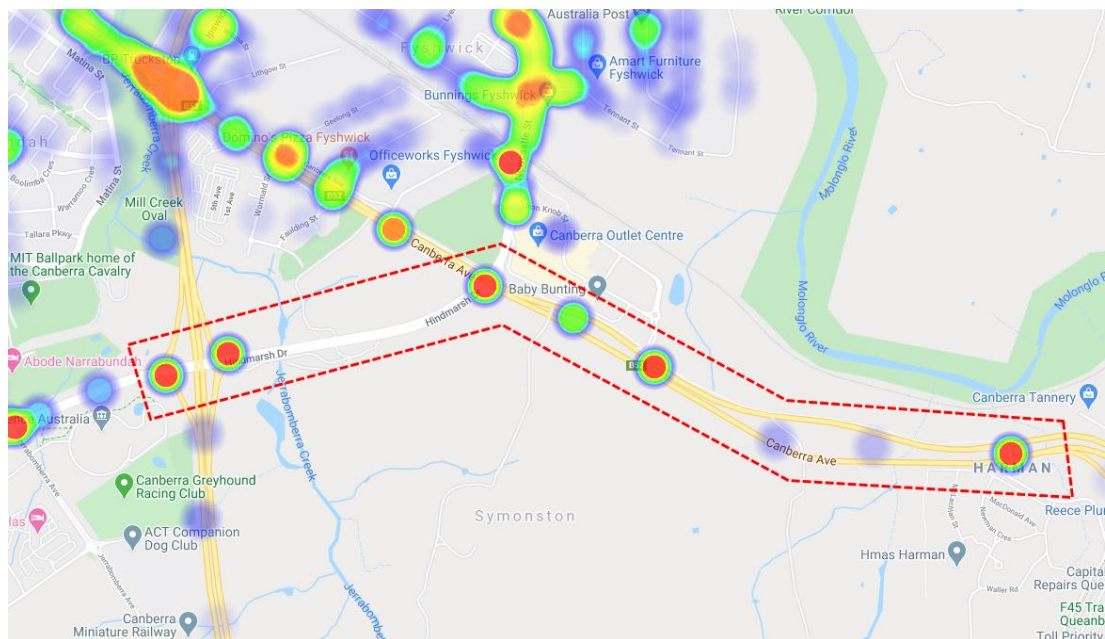

3.3 Crash data analysis

3.3.1 Crash review

A review of crash data provided by Roads ACT has been undertaken. The five-year period (2014- 2018) crash data summary is based on the reports of the Police and the public for the following intersections:

- Canberra Avenue / Woods Lane
- Canberra Avenue / Tom Price Street
- Canberra Avenue / Hindmarsh Road
- Hindmarsh Road / Monaro Highway.

The crash hot spots of reported crashes since 2012 at key intersections within the study area are shown in Figure 3-7.

**The locations with the highest number of crashes shown in orange and red*

Source: ACT Government Open Data Portal, modified by GHD

Figure 3-7 ACT Road crash heat map

The crash history data was collected between January 2014 to December 2018. The number of crashes and crash types at key locations are summarised in Table 3-8.

Table 3-8 Crash types

Locations	Number of Crashes	Predominant crash type (number of crashes)	Number of Casualties
Canberra Avenue / Hindmarsh Drive /Newcastle Street	161	Vehicles from one direction (144) Manoeuvring (7) Intersection crashes (5) Others (5)	6 (injury)
Hindmarsh Drive / Monaro Highway	88	Vehicles from one direction (80) Intersection crashes (3) Others (5)	4 (injury)
Canberra Avenue from Tom Price Street to Woods Lane	42	Vehicles from one direction (32) On Path (6) Off Path on straight (2) Others (2)	3 (injury)
Canberra Avenue / Hindmarsh Drive to Tom Price Street	34	Vehicles from one direction (32) Off Path on straight (2)	2 (injury)
Canberra Avenue / Tom Price Street	24	Vehicles from one direction (18) Manoeuvring (3) Others (3)	2 (injury)
Canberra Avenue / Woods Lane	15	Vehicles from one direction (11) Vehicles from opposing directions (2) Others (2)	1 (injury)

Note: (XXX) – Number of crashes based on crash type

The data indicates that the highest number of crashes occurred at Canberra Avenue and Hindmarsh Drive intersection, with a total of 161 crashes, which involved six injuries. The majority of these crash types were vehicles from one direction, with a total of 144 crashes. The crash type also included manoeuvring (seven crashes) and intersection (five crashes) crashes.

3.4 Public and active transport

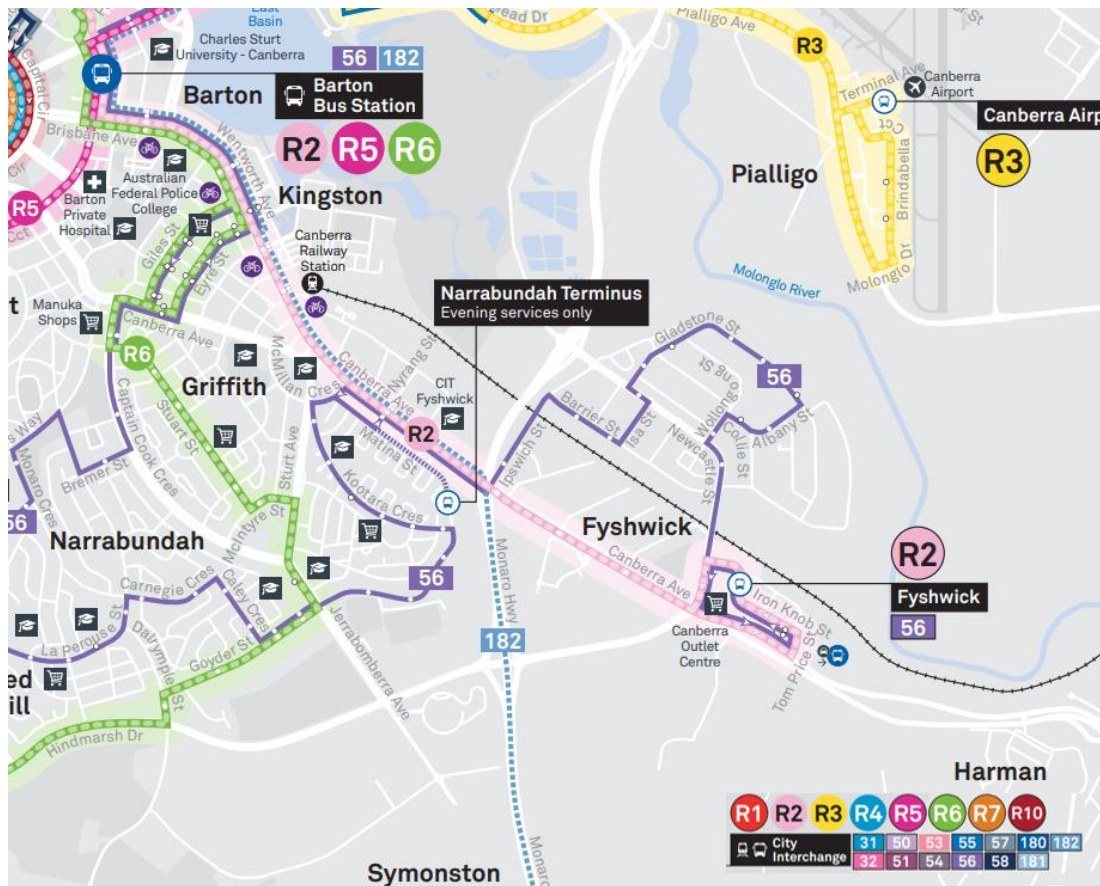

In reviewing the site and its accessibility to public transport opportunities, reference was made to Transport Canberra and Active Infrastructure practitioner tool. This document outlines a recommended walkable distance of 400 m to 800 m to public transport and other local amenities or a 1.5 km bicycle riding distance.

Details of the accessibility to public transport, walking and bicycle riding access is provided in the following Sections.

3.4.1 Bus services

Bus service route map within the study area is shown in Figure 3-8. Bus services operating roads in the vicinity of the project study area are summarised in Table 3-9.

There are a number of bus routes along Canberra Avenue, which includes route 2, 56, 830, 831 and 834. Bus route 182 travels along Monaro Highway with a frequency of one service during AM hour.

Source: Transport Canberra

Figure 3-8 Bus route map

Table 3-9 Bus services

Route	Number of bus services per hour	Coverage
2	Weekday AM (7:00 am – 8:00 am): 4 services Weekday PM: (5:00 pm – 6:00 pm): 6 services Weekend: 1 service per 30 minutes	Fraser West to Fyshwick
2	Weekday AM (7:00 am – 8:00 am): 4 services Weekday PM: (5:00 pm – 6:00 pm): 5 services Saturday: 3 services per 30 minutes Sunday: 1 service per 30 minutes	Fyshwick to Fraser West via City and Belconnen
56	Weekday AM (7:00 am – 8:00 am): 3 services Weekday PM: (5:00 pm – 6:00 pm): 3 services Weekend: 1 service per 2 hours	Fyshwick to City via Red Hill and Kingston
56	Weekday AM (7:00 am – 8:00 am): 5 services Weekday PM: (5:00 pm – 6:00 pm): 4 services Weekend: 1 service per 2 hours	City to Fyshwick via Kingston and Red Hill
182	Weekday AM (7:00 am – 8:00 am): 1 service Weekday PM: No service Weekend: No service	Lanyon to City West via Calwell and Chisholm
182	Weekday AM: No service Weekday PM: (5:00 pm – 6:00 pm): 1 service Weekend: No service	City West to Lanyon via Chisholm and Calwell
830	Weekday AM (7:00 am – 8:00 am): 2 services Weekday PM (5:00 pm – 6:00 pm): 2 services Saturday: 1 service per hour	Queanbeyan Interchange to Canberra City Centre via Manuka & Kingston (private bus service)
830	Weekday AM (8:00 am – 9:00 am): 2 services Weekday PM (5:00 pm – 6:00 pm): 2 services Saturday: 1 service per hour	Canberra City Centre to Queanbeyan Interchange via Manuka & Kingston (private bus service)
831	Weekday AM (8:00 am – 9:00 am): 1 service Weekday PM (5:00 pm – 6:00 pm): 2 services Saturday: 1 service per hour	Queanbeyan Interchange to Woden Interchange via Fyshwick & Canberra Hospital (private bus service)
831	Weekday AM (8:00 am – 9:00 am): 2 service Weekday PM (5:00 pm – 6:00 pm): 2 service Saturday: 1 service per hour	Woden Interchange to Queanbeyan Interchange via Fyshwick & Canberra Hospital (private bus service)
834	Weekday AM (8:00 am – 9:00 pm): 1 service Weekday PM (5:00 pm – 6:00 pm): 1 service Saturday: No service	Queanbeyan Intg to Canberra Airport Precinct via Fyshwick & Majura Pk (Loop Service) - (private bus service)

3.4.2 Bus stops

Bus stop facilities are located near Wood Lane on the eastern and western side of the road. The Canberra Avenue at Woods Lane bus stop is located within the site area. The bus routes at this stop include 830, 831 and 834, providing between one to two service(s) per hour. These bus stops are illustrated in Figure 3-9.

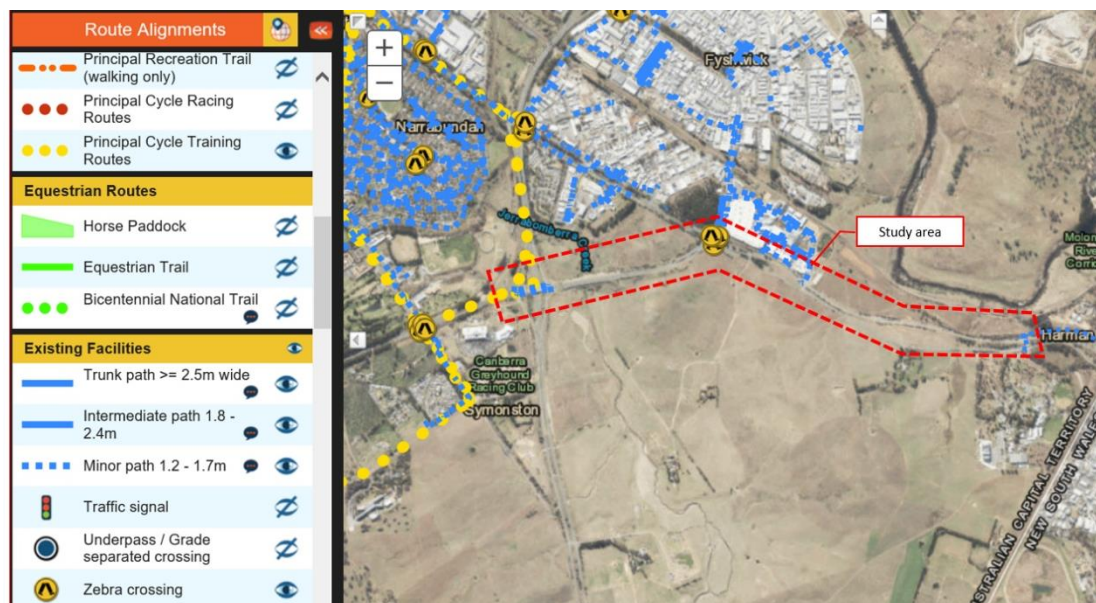

Source: Transport ACT, 2020, modified by GHD

Figure 3-9 Location of bus stops

3.5 Active travel facilities

The existing active travel infrastructure within and in proximity to the study area is displayed in Figure 3-10.

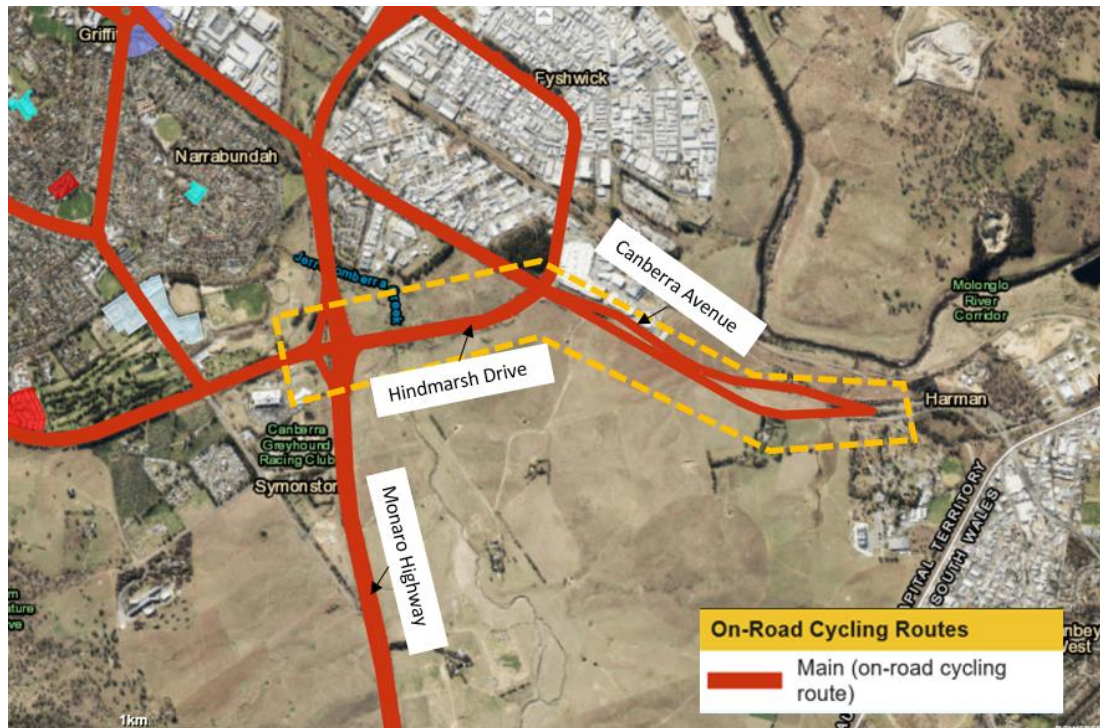

Source: Active Travel Infrastructure Practitioner Tool, modified by GHD

Figure 3-10 Existing walking and cycling facilities

3.5.1 On-road cycling routes

As shown in Figure 3-11, ATIPT shows one type of On-Road Cycling Route in the vicinity of the study area, namely the Main On-Road Cycling Routes (MORCRs) which are located along the following roads:

- Canberra Avenue;
- Hindmarsh Drive; and
- Monaro Highway.

Source: Active Travel Infrastructure Practitioner Tool, modified by GHD

Figure 3-11 On-road cycling routes around the study area

4. Construction activities

This section of the report provides details of key construction activities that have informed the Traffic Impact and Parking Assessment. The activities assessed as part of this Traffic Impact and Parking Assessment include vehicle traffic associated with the construction and delivery of the Project, including workers accessing the site.

4.1 Construction activities and stages

The construction methodology for the transmission line and structures would consist of the following key activities:

- Site establishment, early works and set out works including:
 - Site surveys for pole locations and identification of any existing services/utilities
 - Establishment of site access to pole sites
 - Install environmental controls
 - Vegetation clearing/tree trimming along transmission line easements
 - Establishment of access tracks to structures for construction
- Construction of concrete pole foundations, including:
 - Excavation of pole foundation pads at various sites along the transmission line easements. This would include construction working area of around 30 metres in all directions around each side of each structure.
 - Installation of pole foundations (concrete foundation supports)
- Erection of concrete poles including dressing and erection of concrete poles
- Stringing of conductors with new transmission lines
- Clean up crew closely follow the construction process to pick up any items or construction debris remaining on completion. Use bobcat (where necessary) and then hand rake in the vicinity of each pole, to make good any depressions or unevenness left by construction vehicles or activities.

Typical key construction materials, vehicles and equipment likely to be required for the key construction elements include:

- Air Compressors
- Backhoes
- Bob cats
- Bulldozers
- Concrete agitator
- Concrete pump
- Cranes (various sizes up to 200 tonnes)
- Crawler crane with grab attachments
- Dumper trucks
- Elevated working platforms
- Excavators (various sizes)
- Flatbed Hi-ab truck

- Generators
- Graders
- Piling rig
- Pneumatic jackhammers
- Rigid tippers
- 10-15 tonne rollers
- 12-15 tonne rollers
- Semi-trailers
- Tilt tray trucks
- Trenchers
- Transport trucks
- Watercarts
- Light vehicles
- Heavy vehicles

4.2 Construction program

Construction of the transmission line is expected to take approximately seven months.

4.3 Workforce

4.3.1 Working hours

The construction of the Project would generally be limited to standard hours as follows:

- Monday to Saturday 7:00 am to 6:00 pm.
- No works on Sundays or Public Holidays.

Work outside standard hours is anticipated will only comprise of the following:

- Transmission line cutover and commissioning.
- The delivery of materials outside standard hours requested by Police or other authorities for safety reasons, especially around Monaro Highway and Canberra Avenue.
- Emergency work to avoid the loss of lives and/or property.
- Work timed to correlate with system planning outages.

4.3.2 Workforce

The construction workforce would vary depending on the stage of construction and associated activities.

During peak construction activities, the Project would employ around 115 to 125 workers, with an average workforce anticipated to be around 25 to 35 workers (depending on the stage of construction works).

4.4 Construction vehicles

A summary of the construction equipment is provided in Table 4-1. Most of this equipment would mobilise to site and stay for the duration of the construction period.

Table 4-1 Construction equipment

Activity	Equipment	Quantity
Boring	Boring machine	1
Excavation	Tip trucks (20t empty, 40t loaded)	2
Pole delivery	Truck	1
Conductor stringing	Winch truck (10t)	1
	Lighter winch trucks (10t)	2
Minor equipment	Trucks or others	18
Guiding pole installations	Light vehicles	15
Total		40

5. Traffic impact assessment

This section outlines the traffic implications during the construction and operation of the Project.

5.1 Construction traffic generation

5.1.1 Mobilisation

Initial mobilisation of the Project would involve the delivery of plant and equipment to the site. This is expected to occur over a period of a week, with a summary of the expected peak traffic generation:

- Approximately 25-35 vehicle trips accessing the site area per peak hour (based on typical worker numbers and travel via private means individually); and
- An assumed 3-10 heavy vehicle trips during the peak hour.

Construction traffic associated with the mobilisation of the Project is expected to access the site, from Canberra Avenue.

This traffic generation is considered to be low and within the daily fluctuation in traffic at roads in the surrounding road network. The mobilisation activities are therefore expected to have negligible traffic impacts.

5.1.2 Establishment of construction office/ amenities, equipment storage and laydown areas

Where road access is possible to the construction work area, poles will be laid directly at the pole location. If access is not possible, poles will be laid down in designated laydown areas until required to be installed.

5.1.3 Construction

Construction is expected to occur over a period of approximately seven months and would require approximately around 25 to 35 construction personnel. Construction vehicle traffic would be greatest during the main earthworks and civil construction for the substation, and would comprise vehicles transporting equipment, materials and spoil, and construction workers accessing the work sites.

Most of the light vehicle movements associated with the construction works would generally be limited to construction staff travelling to and from the site for work. The following are the expected vehicle movements during the construction period:

- Ten light vehicles - Indicative daily movements (typical day)
- 15 light vehicles - maximum daily movements (critical/peak construction period)
- 20 heavy vehicles - Indicative daily movements (typical day)
- 25 heavy vehicles - maximum daily movements (critical/peak construction period)

A summary of the expected two-way (i.e. one vehicle trip) traffic generation is provided in Table 5-1 for general construction traffic and trips associated with personnel accessing the site. This results in the anticipated following peak hour traffic generation:

- AM peak hour (8:00 am – 9:00 am):
 - 15 light vehicles arriving at the construction site
 - Three heavy vehicles arriving at the construction site

- PM peak hour (5:00 pm – 6:00 pm):
 - 15 light vehicles departing the construction site
 - Three heavy vehicles departing the construction site

It should be noted that for this traffic assessment, the total number of construction traffic has been assumed as above based on a combination of private vehicles use and groups of workers arriving within the heavy vehicles. The assessment is based on an assumed worst case scenario. However, the construction movement during the road network peak hours could be less with workers arriving and departing the site outside the road network periods.

Table 5-1 Construction traffic generation - two-way traffic

Vehicle type	Movement type	Daily traffic generation (vehicles)	Peak Hour traffic generation (vehicles)
Heavy vehicles	Construction workforce movements	25	3
Light vehicles	Construction workforce movements	15	15
Total		40	18

5.2 Construction vehicle access routes

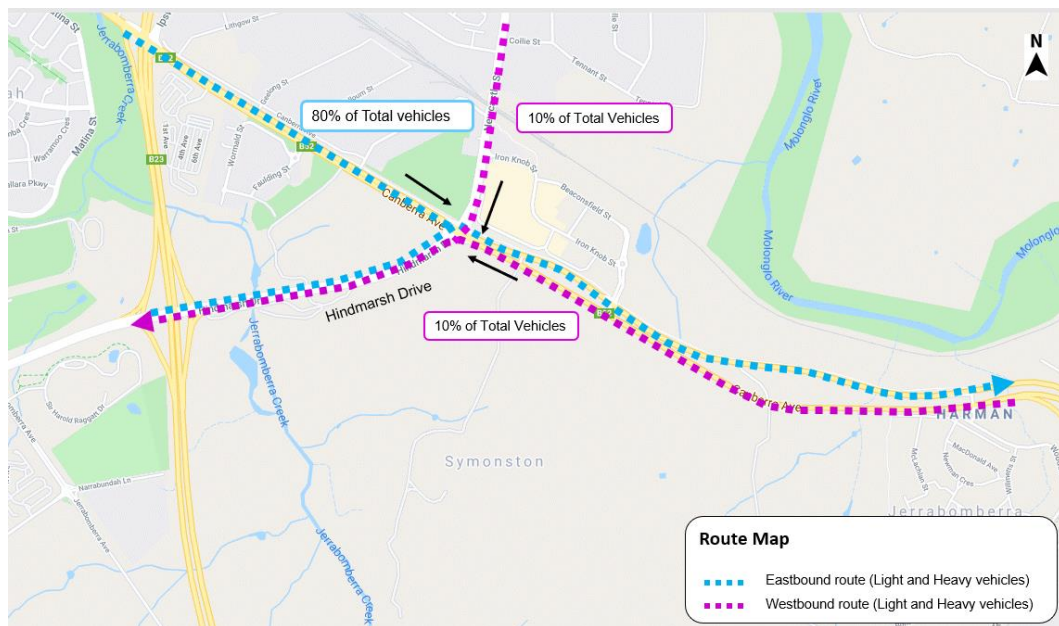

Since the proposed works are to be carried out within the road verge (Hindmarsh Drive / Canberra Avenue), there is already an access to existing overhead lines (which will be relocated as a separate project). Where possible, existing access tracks would be used to access transmission line easements.

However, as part of the construction of the new transmission line, some additional access points to each of the transmission line pole structures would be required (up to five metres wide). These tracks would typically consist of unsealed surface roads and would allow for access during the operation stage of the Project, for maintenance purposes. These tracks would be built in accordance with the Best Practice Guidelines for Fire Trail Construction and Maintenance (Bushfire Coordinating Committee 2007).

In this assessment, it is assumed that 80 percent of construction traffic would approach from north of Canberra Avenue and turn right to Hindmarsh Drive as shown in Figure 5-1. Ten percent of construction vehicles would access the site from Newcastle Street travelling to Hindmarsh Drive. The remaining 10 percent of construction vehicles would access the site from south of Canberra Avenue. It is anticipated that vehicles from the north-west will utilise the existing signalised intersection arrangement at Canberra Avenue / Woods Lane to access the southern verge of Canberra Avenue.

Partial Lane closure might be required during conductor stringing across Monaro Highway. In addition, partial lane closure of Canberra Avenue (towards City) and Hindmarsh Drive might be required during delivery of poles and other heavy equipment. Any lane closures should occur outside the road network peak period to minimise travel delays on the road network.

The desktop review based on google street imagery, undertaken for Hindmarsh Drive and Canberra Avenue indicate that Canberra Avenue and Hindmarsh Drive are generally in straight alignment. Therefore, visibility upon egress should be available to be aligned with Austroads Road Design principles subject to clearance of any obstruction that may impede sight lines. Contractors to ensure the egress is clear of any obstruction. Vehicles to enter and exit the access in a forward direction to ensure safety is maintained.

Source: Google Maps (2020), modified by GHD

Figure 5-1 Construction traffic route

5.3 Site egress: Sight distance review

A desktop review of sight distance has been undertaken for the potential construction access locations to determine whether there is adequate longitudinal sight distance to allow drivers exiting the site egress locations to have sufficient sight distance to avoid potential conflicts.

This review has been undertaken based on a desktop assessment only, using Google Maps and Google Street view. No plans have been provided for the review. It should be noted that the actual sight distances observed on site may differ from the Google images, which may be outdated as a result of new vegetation and changes to the road environment, or distortion of distance associated with the streeview photography, etc.

The potential access points for the installation of poles during construction work are shown in Figure 5-2 and Figure 5-3.

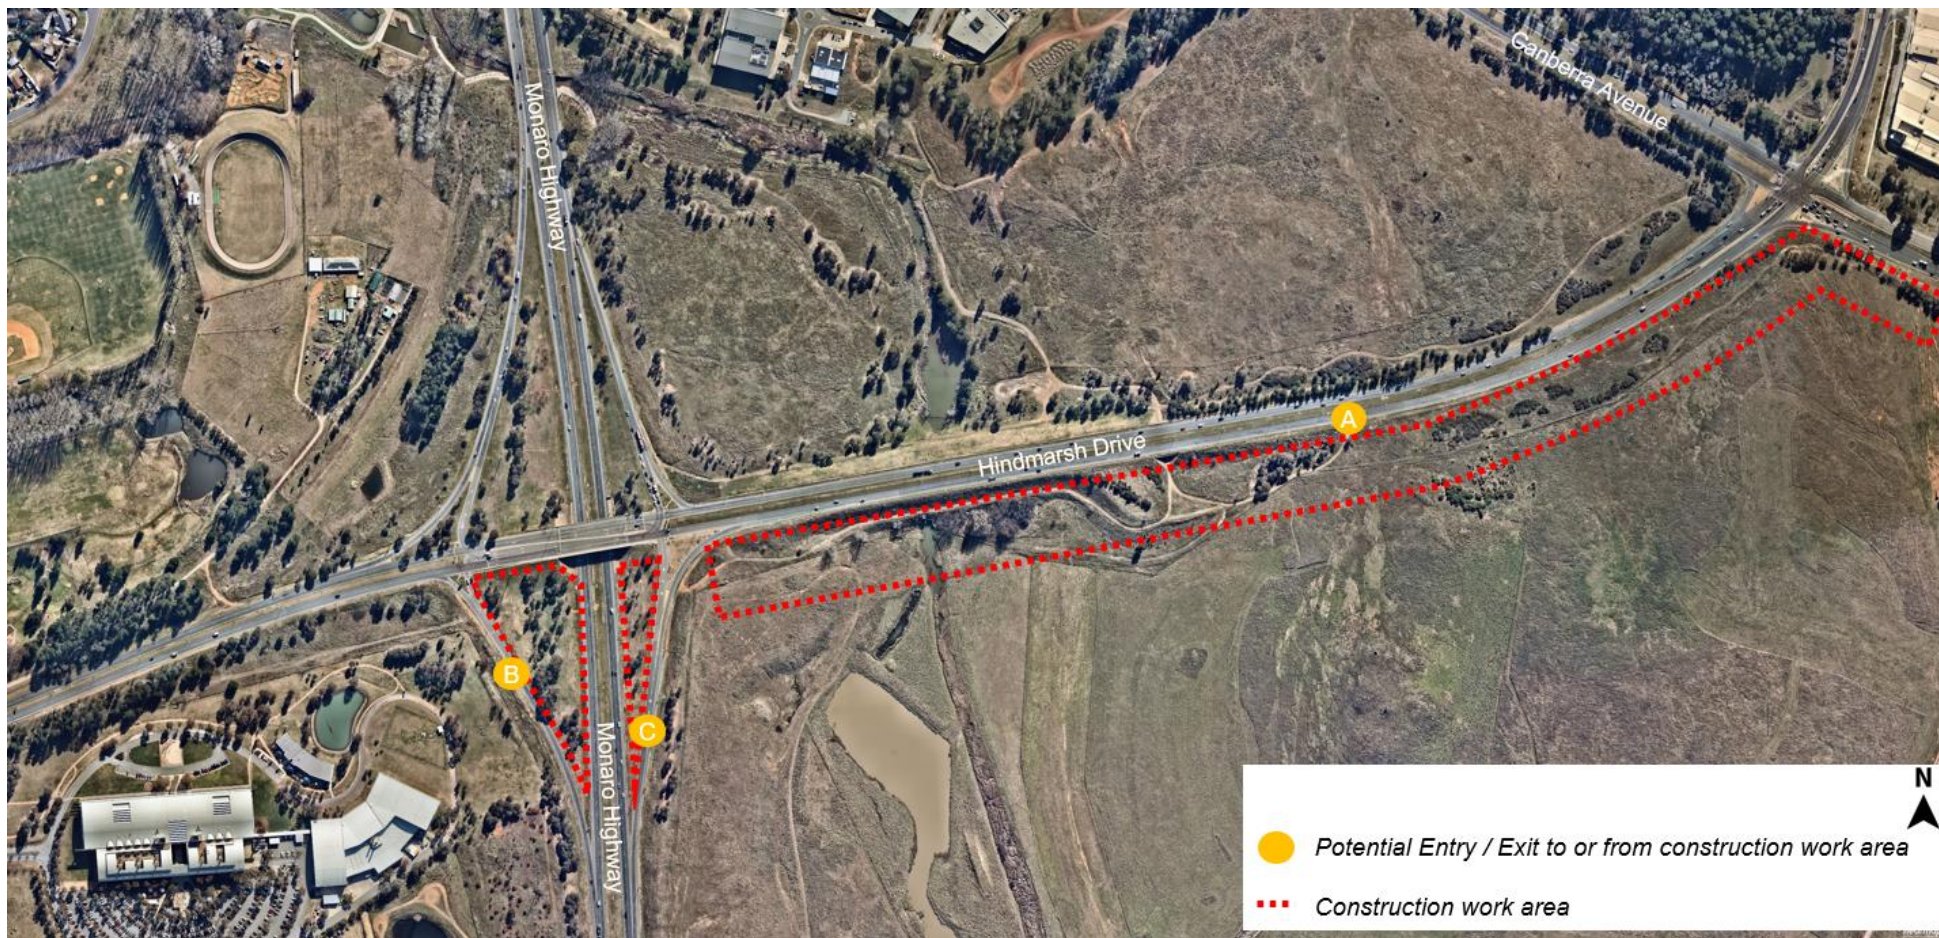

Figure 5-2 Potential Entry / Exit to or from construction work area

Source: Nearmap modified by GHD

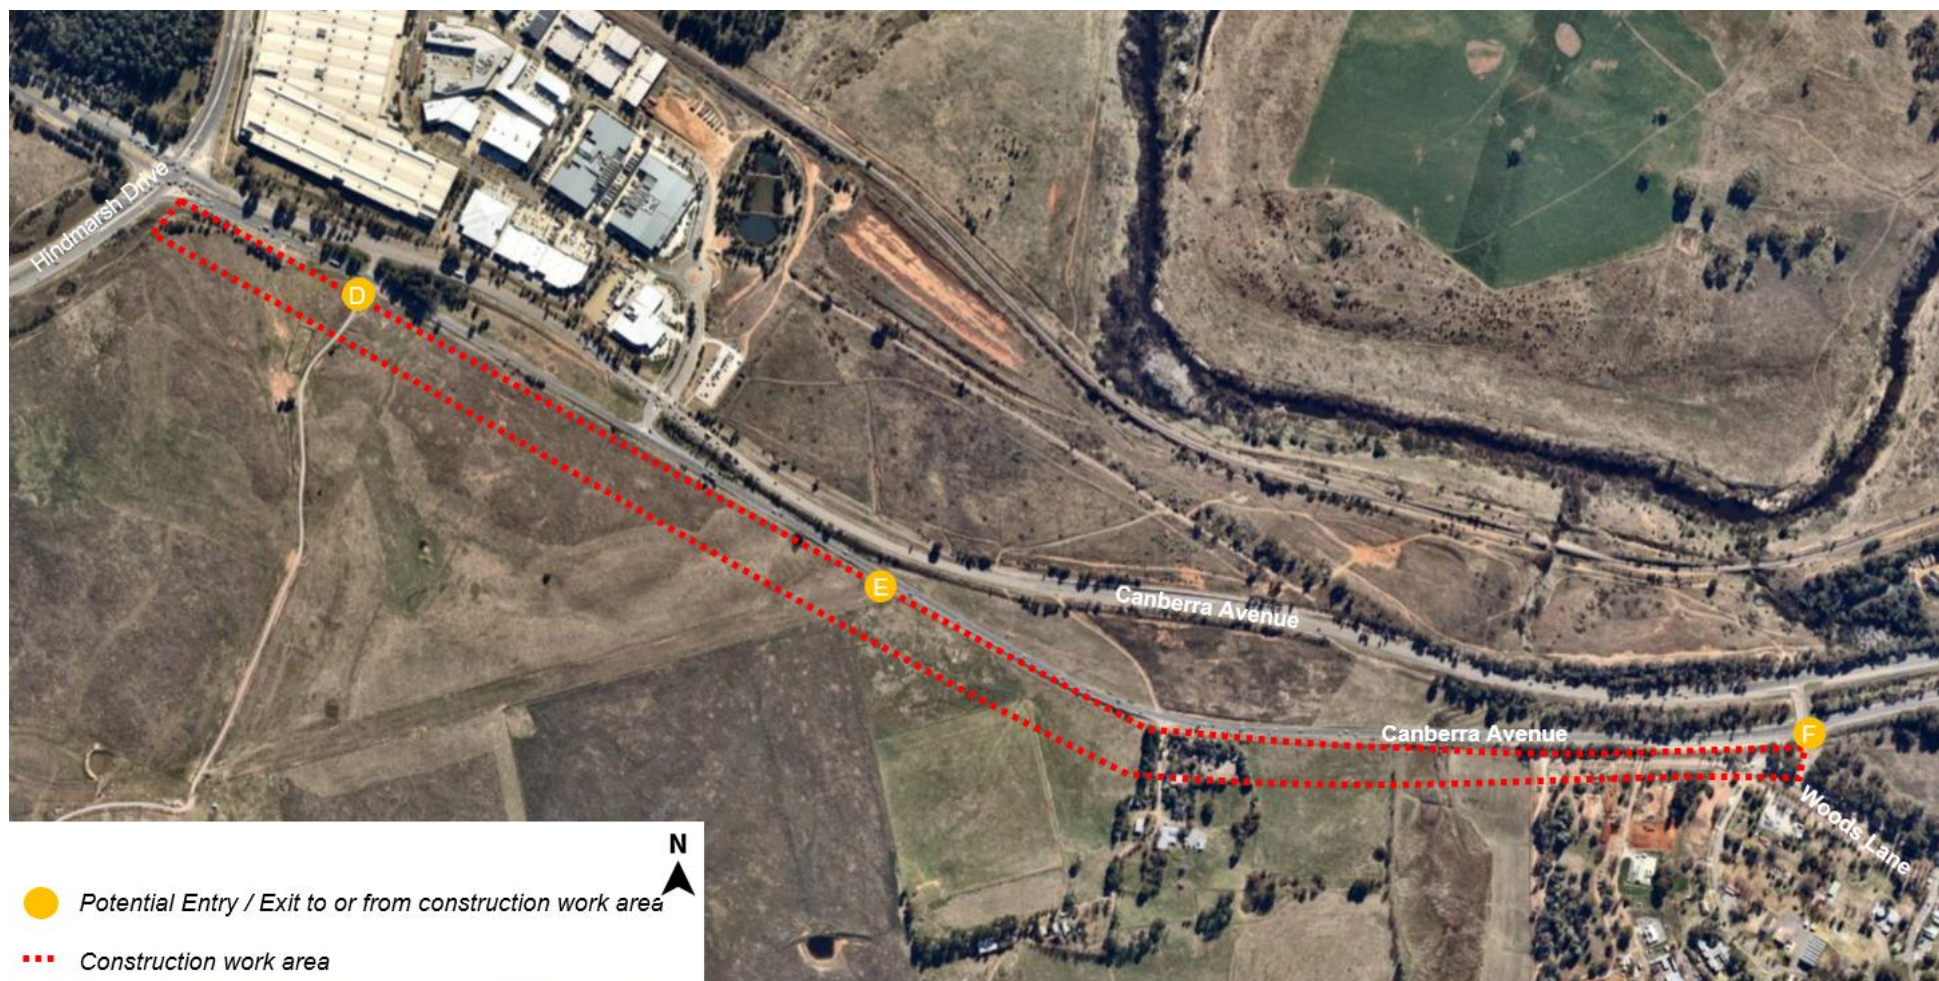

Figure 5-3 Potential Entry / Exit to or from construction work area

Source: Nearmap modified by GHD

Safe Intersection Sight Distance (SISD)

The required sight distances for each access point have been derived from the *Guide to Road Design, Part 4A: Unsignalised and Signalised Intersections* (Austroads, 2021), which specifies the following: *Safe Intersection Sight Distance (SISD)*. This is the minimum sight distance that should be provided on the major road at an intersection. This is to provide sufficient distance for a driver of a vehicle on the major road to observe a vehicle on a minor road approach moving into a collision situation and to decelerate to a stop before reaching the collision point. The SSD is measured from a driver eye height of 1.1 m above the road to points 1.25 m above the road, which represents drivers seeing the upper part of cars.

As shown in Table 5-2, the potential access points will provide safe intersection sight distance along Canberra Avenue, Hindmarsh Drive and Monaro Highway to safely exit the construction work area. It must be noted, the vehicles entering the construction work area should reduce speed appropriately to safely enter the access points.

**Table 5-2 Approach Sight distance requirements for cars and trucks–
Canberra Avenue, Hindmarsh Drive and Monaro Highway to
construction access points**

Potential Access Points	Location	Design Speed (km/h)	SISD (minimum requirement)	
			Required (m) * cars	Observed distance (m) (direction towards access) - cars
Access A	Hindmarsh Drive, westbound	80	181	190
Access B	Monaro Highway, northbound off ramp, South of Hindmarsh Drive,	80	181	220
Access C	Monaro Highway, southbound on ramp, South of Hindmarsh Drive,	80	181	185
Access D	Canberra Avenue, south of Hindmarsh Drive, westbound	80	181	285
Access E	Canberra Avenue, south of Hindmarsh Drive, westbound	80	181	400
Access F	Canberra Avenue and Woods Lane (existing intersection)	80	N/A^	

(*) based on level terrain and reaction time of 2 seconds and at assumed grade level

(^) signal controlled intersection managing vehicle egress

Base on the desktop investigation, the potential site access/egress location will provide a safe intersection sight distance, given that the minimum SISD requirement is met. It should be noted that the assumed site locations may vary during the development of the detailed construction traffic management plan (to be undertaken by the engaged contractor prior to commencement of works). The above site access/egress locations or any alternate location should be reviewed on site and based on design plans, to ensure SISD is provided to maintain safe access and egress to the site.

5.4 Construction impacts

5.4.1 Traffic impact

Based on the traffic generation and traffic distributions outlined in Section 5.1 and 5.2, the following sections summarise the expected increase in daily and peak hour traffic during peak construction activities. This peak construction period includes traffic associated with the following construction activities, which are expected to occur at the same time for a period of up to seven months.

Daily traffic construction traffic

The expected increase in daily traffic associated with the peak construction activity for the Project are as following:

- AM peak hour (8:00 am – 9:00 am):
 - 15 light vehicles arriving at the construction site
 - Three heavy vehicles arriving at the construction site
- PM peak hour (5:00 pm – 6:00 pm):
 - 15 light vehicles departing the construction site
 - Three heavy vehicles departing the construction site

It should be noted that the peak hour traffic generation is associated with light vehicle movements during shift changeover periods. Light vehicle movements during other times of the day are expected to be minimal. A smaller volume of traffic movement will occur during the day, both of which consist of low traffic volumes, which will not adversely impact the existing operation of the road network.

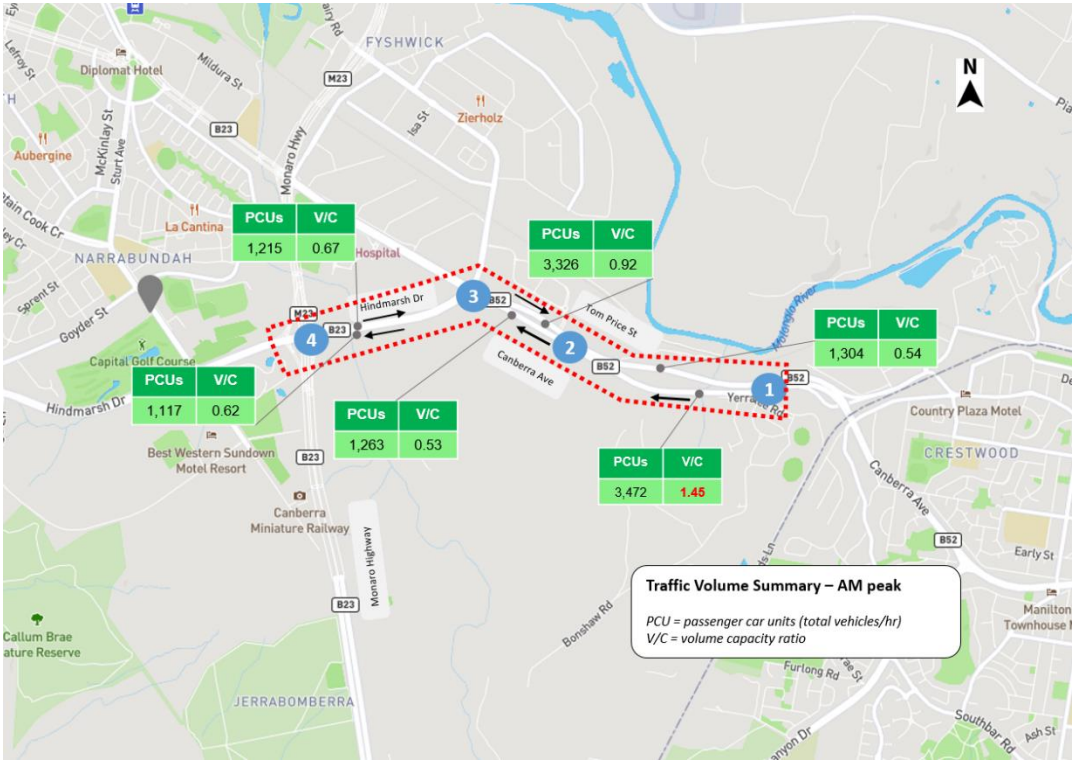

Midblock assessment

The VCR and PCU at Canberra Avenue and Hindmarsh Drive during AM and PM peak are shown in Figure 5-4 and Figure 5-5 respectively. The following are the key findings of midblock assessment:

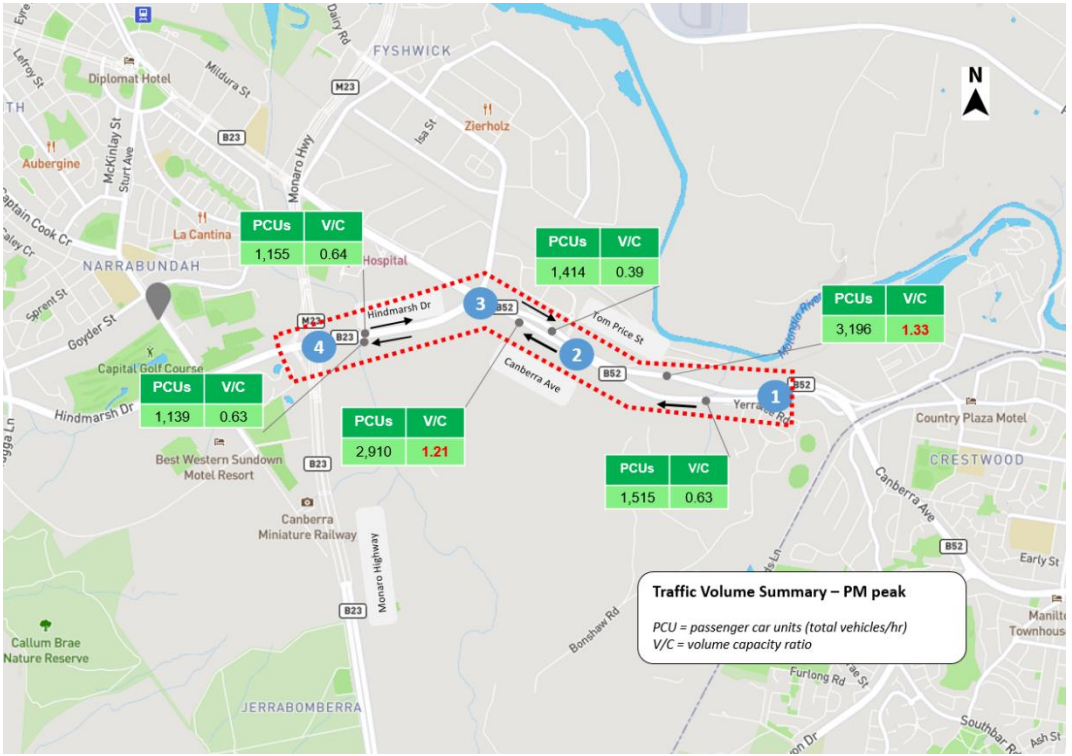

- The traffic generation associated with the peak construction activity for the Project has been assessed and is estimated to result in an increase of 15 light vehicles and three heavy vehicles during AM and PM peak hours.
- The traffic data indicates that under the existing conditions, Canberra Avenue east of Tom Price Street is over theoretical capacity with a VCR of 1.45 during AM peak in the westbound direction.
- During PM peak, under the existing conditions, Canberra Avenue has a VCR of 1.33 east of Tom Price Street in the eastbound direction.
- Canberra Avenue was found to have a VCR of 1.21 in the westbound direction west of Tom Price Street during peak.
- The VCR at Hindmarsh Drive is found to be within capacity during the existing. Therefore, it is expected to operate well during the construction period.

In summary, the data indicates that Canberra Avenue is over capacity under the existing condition. However, it should be noted that the additional traffic during the construction period is equivalent to less than one vehicle per minute during the peak hour arrival and departure period. Similarly, it is anticipated the additional traffic during construction will be low, at Monaro Highway. Therefore, the additional traffic during the construction period will not adversely impact

the existing road network operation and would be within the typical daily fluctuation in traffic at these locations.

Source: Transport Canberra Map Modified by GHD
Figure 5-4 Traffic volume AM peak

Source: Transport Canberra Map Modified by GHD
Figure 5-5 Traffic volume PM peak

5.4.2 Workers car parking

Site personnel are expected to park at car parking areas provided at the construction sites, which would be managed by the contractor. Vehicle parking spaces for construction personnel would generally be within 30 metres of each pole location site. As such, there is expected to be minimal impacts to on-street car parking in the study area.

5.4.3 Public transport

A bus stop is located at the southern side of Canberra Avenue, north of Wood Lane. Currently, bus services operate at hourly intervals from this location. The impact of bus services should be managed through the development of a Traffic Management and Control Plan. It should be noted that the bus stop would not be impacted by construction activities. Bus service operators will also be notified prior to works commencement.

5.4.4 Pedestrians and bicycle riders

The proposed construction arrangements are not expected to impact pedestrians. However, there are on-road cycle routes at Canberra Avenue and Hindmarsh Drive. It is recommended that the Traffic Management and Control Plan, to be developed by the contractor, considers the management of cyclist along the adjoining road network to the works areas.

5.5 Operational impacts

5.5.1 Traffic generation

During the operation of the Project, traffic would be limited to TransGrid and Evoenergy staff and associated contractors. The regularity of these visits would be monthly or quarterly for the substation inspection and once a year for the transmission line inspection.

It is likely that inspection activities would be mainly carried out using light vehicles (approximately one to three vehicles). Larger vehicles and equipment such as trucks, elevated work platforms and cranes (approximately ten personnel) would be used for maintenance activities such as replacing/ refurbishing fittings on the transmission line. Existing access track and transmission line easement will be utilised for this activity.

This is assumed to result in the following peak hour traffic generation

- AM peak hour (8:00 am – 9:00 am):
 - Three light vehicles arriving and departing the site
 - Five heavy vehicles arriving and departing the site
- PM peak hour (4:00 pm – 5:00 pm):
 - Three light vehicles arriving and departing the site
 - Five heavy vehicles arriving and departing the site

5.5.2 Traffic impacts

The operational peak hour traffic is expected to be lower than the peak hour traffic associated with the construction activities. The operation of the project traffic is low and will not adversely alter the existing road network operating conditions.

5.5.3 Car parking

Personnel are expected to park at a designated off street location, close to the site. As such, there is expected to be minimal impacts to on-street car parking in the study area.

5.5.4 Public transport

The operation of the Project would not impact train or bus services operating in the vicinity of the construction sites. The additional traffic generated by the operation of the Project is expected to have minimal impacts on public transport services.

5.5.5 Pedestrians and bicycle riders

Operation of the Project would not impact pedestrian or bicycle facilities. The minor increase in traffic movements associated with the Project is expected to have minimal impacts to pedestrians and bicycle riders.

6. Mitigation measures

6.1 Construction activity traffic management

6.1.1 Construction traffic management objective

A Traffic Management and Control Plan (TMCP) (incorporating a Temporary Traffic Management plan (TTM)) will need to be prepared prior to the commencement of works with site induction for construction personnel being undertaken to outline the requirements of the TMCP/TTM. The aim of the TMCP/TTM is to maintain the safety of all workers and road users within the vicinity site and the following are the primary objectives:

- To minimise the impact of the construction vehicle traffic on the overall operation of the road network.
- To provide continuous, safe and efficient movement of traffic for both the general public and construction workers.
- Installation of appropriate advance warning signs to inform users of the changed traffic condition.
- To provide a description of the construction vehicles and the volume of these construction vehicles accessing the construction site.
- To provide information regarding the changed access arrangement and also a description of the proposed external routes for vehicles, including the construction vehicles accessing the site.
- Establishment of a safe pedestrian environment in the vicinity of the site.

6.1.2 Traffic management

All developers and contractors intending to use any part of a road or road related area such as a footpath will need to apply to Roads ACT for the authorisation of a TTM plan.

TTM plans are used to manage the safety of the public and workers on site. They document the authorisation to install, display or interfere with, change or remove traffic control devices (TCDs), temporary TCDs and other features. All TTM plans must be prepared by a qualified person and must include details on:

- The start date and end date of works.
- The extent of the proposed work area.
- TCDs, including temporary devices, that are to be installed, removed or altered.
- The licence number of the person who prepared the plan.

In addition to a TTM plan, developers and contractors will need to apply for:

- Work approval – for any occasion when work will occur on public unleased land including the implementation of measures included within the TTM plan
- Approval to temporarily close a public road or use a closed public road.

Access to the surrounding public road network will be maintained throughout the construction period. Vehicles will be permitted to travel past the worksite with traffic signage in accordance with the TMCP/TTM incorporating Traffic Control Plan (TCP) to be developed in accordance with AS1742.3 – *Traffic Control for Works on Roads and the relevant authority guidelines by accredited personnel*.

Key site access could be identified with “Truck turning” signs to advise motorists of changes on the road network or vehicle movements to/from the site. Additionally, “Road workers” symbolic and associated signage should be provided to inform motorists of the impending works within and adjacent to the roads and associated workers.

Lane closures should be undertaken outside the road network peak with the appropriate signage and traffic control.

Consideration should be given to the proximity of workers to the through traffic movement, with roadwork speed reduction in place should workers be proximate to high speed areas.

TCPs will need to be developed as part of the TMCP/TTM prior to commencing construction activity on the site.

6.1.3 Construction traffic routes

To reduce the potential impacts on intersection performance surrounding the site, it is recommended that construction vehicles access the site via the construction traffic routes identified in Section 5.2.

Peak heavy vehicle traffic movements should be minimised, where possible, during the AM and PM peak hour and during the middle of the day on the weekend, when higher traffic volumes occur within the road network.

6.1.4 Parking for construction workers

Encouraging carpooling between workers will decrease traffic activity and parking demand.

However, parking for construction workers is provided within the site. Parking on the public road network is not to occur, with the exception of works to be carried out in road reserve areas.

6.1.5 Pedestrians and cyclists management

Site access is to be restricted to authorised personnel only and existing employees on site. Pedestrian access to and around the site is to be maintained at all times. It is anticipated the pedestrian activity in public areas surrounding the site will be low due as there is no designated footpaths provided for the majority of the road section at the southern side of Canberra Avenue (primary area of works).

Within the site, pedestrian travel paths are to be maintained to key areas such as construction entrances and be free from trip hazards.

There are on-road cycle routes at Canberra Avenue and Hindmarsh Drive. It is recommended that the TMCP, to be developed by the contractor, considers the management of cyclists along the adjoining road network to the works areas.

6.1.6 Road hazards

The TMCP/TTM should identify specific road hazards associated with the area, including but not limited to:

- wet weather;
- pedestrians and bicycle riders;
- general traffic; and
- bus transport.

6.2 Post development traffic and parking management

Post development traffic incorporates the ongoing maintenance of the infrastructure following construction. Such maintenance is temporary in nature. The regularity of these visits would be monthly or quarterly for the substation inspection and once a year for the transmission line inspection.

During these inspections and associated maintenance, appropriate temporary traffic management will need to be applied with the application and approval of the TTM to the road authority. Similar to the construction phase, the TTM is to consider the safety of workers and the public, accessibility for all road users around the works site and the associated amenity to minimise delays to traffic (including pedestrians and cyclists).

7. Conclusion

The broad conclusion of this traffic impact assessment report is summarised as follows:

7.1 Construction impacts

7.1.1 Traffic generation

The peak construction of the Project is expected to generate the following traffic during the AM and PM peak hours:

- AM peak hour (8:00 am – 9:00 am):
 - 15 light vehicles arriving at the construction site
 - Three heavy vehicles arriving at the construction site
- PM peak hour (5:00 pm – 6:00 pm):
 - 15 light vehicles departing the construction site
 - Three heavy vehicles departing the construction site

Works would be limited to the recommended standard hours for construction work being:

- Monday to Saturday 7:00 am to 6:00 pm
- No works on Sundays or Public Holidays.

Work outside standard hours is anticipated to only comprise of the following:

- Transmission line cutover and commissioning
- The delivery of materials outside standard hours requested by police or other authorities for safety reasons, especially around Monaro Highway and Canberra Avenue
- Emergency work to avoid the loss of lives and/or property
- Work timed to correlate with system planning outages.

7.1.2 Traffic impacts

Based on a highly conservative assessment, the VCR results for the AM and PM peak hours indicates that the majority of key roads in the vicinity of the Project are expected to operate well within the acceptable capacity for weekday morning and evening peak periods.

Canberra Avenue, east of Tom Price Street, westbound has a VCR of 1.45 during AM peak. Similarly, during PM peak Canberra Avenue is found to be over capacity with a VCR of 1.33 east of Tom Price Street in an eastbound direction and a VCR of 1.21 west of Tom Price Street, in a westbound direction. Although Canberra Avenue is currently over theoretical capacity under the existing condition, the additional construction traffic is not anticipated to alter the road network conditions from the existing situation, as the construction works consists of low traffic volumes and the primary arrival and departure of workers is likely to be outside the peak road network operation. Similarly, it is anticipated that due to lower additional traffic during construction at Monaro Highway, there will be no adverse impact on the existing road network operation and would be within the typical daily fluctuation in traffic. The VCR at Hindmarsh Drive is found to be within capacity during the existing condition. Therefore, it is expected to operate well during the construction period.

Preliminary site access investigations in relation to sight distances indicate the potential egress locations will have sufficient safe intersection sight distance. Should the assumed site access/egress locations vary during the development of the detailed construction traffic

management plan (to be undertaken by the engaged contractor prior to commencement of works), the potential locations or any alternate location should be reviewed on site and based on design plans, to ensure SISD is provided to maintain safe access and egress to the site.

7.1.3 Car parking

Personnel are expected to park at off street locations close to each construction site, which would be managed by the contractor. As such, there is expected to be no adverse impacts to on-street car parking in the study area.

7.1.4 Public transport

A bus stop is located at the southern side of Canberra Avenue, north of Wood Lane. The impact of bus services should be managed through the development of a TMCP.

7.1.5 Pedestrians and bicycle riders

The proposed construction arrangements is not expected to impact pedestrian. However, there are on-road cycle routes at Canberra Avenue and Hindmarsh Drive. Therefore, it is recommended that cycle management plan should be undertaken during the construction period.

7.2 Operational impacts

7.2.1 Traffic generation

During the operation of the Project, traffic numbers would be limited to TransGrid and Evoenergy staff and associated contractors. The regularity of these visits would be monthly or quarterly for the substation inspection and once a year for the transmission line inspection.

It is likely that inspection activities would be mainly carried out using light vehicles (approximately one to three vehicles). Larger vehicles and equipment such as trucks, elevated work platforms and cranes (approximately ten personnel) would be used for maintenance activities such as replacing/ refurbishing fittings on the transmission line. Existing access track and transmission line easement will be utilised for this activity.

7.2.2 Traffic impacts

The operational peak hour traffic is expected to be low during the peak hour traffic associated with the construction activities. The operation of the project traffic is therefore expected to have no adverse traffic impacts to the surrounding road network.

7.2.3 Car parking

Personnel are expected to park at a designated off street location, close to the site. As such, there is expected to be no adverse impacts to on-street car parking in the study area.

7.2.4 Public transport

A bus stop is located at the southern side of Canberra Avenue, north of Wood Lane. The impact of bus services should be managed during the operation period.

7.2.5 Pedestrians and bicycle riders

The operational activities is not expected to impact pedestrian. However, there are on-road cycle routes at Canberra Avenue and Hindmarsh Drive that would be impacted. Therefore, it is recommended that TMCP to be developed by the contractor to consider the management of cyclist along the adjoining road network to the works areas.

7.3 Mitigation measures

It is recommended that the following key mitigation measures be implemented for the development:

- A TMCP/TTM be prepared and approved by the road authority prior to the commencement of works with site induction for construction personnel being undertaken to outline the requirements of the TMCP/TTM. The aim of the TMCP/TTM is to maintain the safety of all workers and road users within the vicinity site, including but not limited to:
 - Site access routes;
 - Construction parking arrangement;
 - Traffic management;
 - Pedestrian and bicycle rider management; and
 - Roadside hazards.
- The construction site access layout is reviewed during design development to consider the turn path required for the construction vehicles.

7.4 Conclusion

Based on the assumptions and investigations undertaken by GHD and the conclusions drawn in this report, it is considered that the proposed infrastructure works does not have an adverse impact on the road system subject to the recommended mitigation measures being applied.

Appendices

Appendix A – (Traffic Counts)

Set69 Hindmarsh Drive & Canberra Avenue

Monday, 10-Feb-20	20																
	Approach	etect	or(s).
